### Water-Energy-Waste Nexus: The Singapore Journey - Deep Tunnel Sewerage System Phase 2 & Integrated Waste Management Facility

*“Managing our Water Loop Intelligently”*

#### Synopsis

The Deep Tunnel Sewerage System (DTSS) Phase 2 and the Integrated Waste Management Facility (IWMF) are iconic flagship projects undertaken by PUB and NEA respectively in the arena of used water management and solid waste treatment. Both projects have undergone their preliminary engineering design studies and would be embarking on their next phase of project development. The 2.5 hr forum aims to provide more insights to both projects, including co-location synergy aspects between the two facilities. This will be an opportunity for industry players, technology providers, system integrators and academia to network and gather interest in the implementation of the project.
